

Connect Brazil

Restriction-free roaming

One of the biggest challenges for IoT solutions in Brazil is the ability to roam permanently. Brazilian law does not allow non-Brazilian IMSIs' roaming to extend beyond 90 days, making IoT deployment in the market difficult and expensive.

Tailored to the Brazillian market, our Connect solution complies with all official the restrictions and taxation regulations for providers by using JT IoT's special local profile network setup. Roam permanently on all Brazillian networks and connect to our global footprint when devices leave the country.

No SIM replacement on device arrival in Brazil.

No separate local roaming contracts.

No additional management software for in-market and global SIM management.

Simplify your access to one of the biggest IoT markets with Connect Brazil.

All SIM form factors

Centralised invoicing for in-market and global solutions

Permanent roaming on all Brazilian networks

IoT management platform
