

One eSIM. One Platform. One Global Network.

ULTIMATE SIM

#ConnectivityReimagined

One eSIM. One Platform. One Global Network.

#ConnectivityReimagined

With over 17 million IoT connections worldwide, Velos is leading the industry with worldclass connectivity. We are proud to continue this leadership with ULTIMATEsIM, a smart eSIM optimised for IoT that can intelligently switch carriers on-the-go so that your device or asset always has high-quality connectivity with great cost efficiency.

So why settle with just one carrier?

- 700+**
networks
- 200+**
territories
- 5G**[📶]

- LPWAN**[📶]
enabled

Out-of-box Global Coverage:

Connect your devices and assets the moment they are switched on with a preloaded profile offering global reach.

Seamless Management:

Integrate every step of your connectivity - from provisioning and monitoring to billing - into your existing system.

One eSIM Forever:

Futureproof your investment and derive maximum long term value out of your asset enabled by over the air carrier switching.

Forget Carrier Lock-in:

Leverage multiple operators and adhere to roaming restrictions. So, as we've already mentioned, why settle with one carrier?

Efficiency Unlocked:

Manage connectivity costs with connectivity parameters designed for your needs and budget.

Reliable Connectivity:

Diversified connectivity paths ensure your asset remains connected with minimal downtime & without interruptions.

Great Connectivity Demands Great Support

Single Contract | Consolidated Invoicing | Customisable Service-levels
